Professional Summary

Computer Science undergraduate specializing in Artificial Intelligence and Machine Learning at JNTU Hyderabad, with hands-on experience building AI-powered applications, machine learning systems, automation tools, and full-stack web applications using Python. Strong foundation in Data Structures and Algorithms, backend development, databases, and machine learning, with a focus on building practical and scalable software solutions.

Technical Skills

Programming Languages	Python, JavaScript, C++
Machine Learning	Machine Learning, Scikit-learn, NumPy, Pandas, Feature Engineering, Data Pre-processing, Model Training, Model Evaluation
Computer Vision	OpenCV
Natural Language Processing	
Backend	FastAPI, Flask, PHP, WebSockets
Web Technologies	HTML, CSS, JavaScript, Bootstrap
Databases	MySQL, TiDB
Tools	Git, GitHub, VS Code, Selenium
Core Concepts	Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Software Development

Projects

AlignWell – AI-Powered Posture Assessment and Exercise Monitoring System

- Developed an AI-powered posture assessment system using Python, FastAPI, MediaPipe, and OpenCV to analyze exercise movements and identify incorrect form.
- Implemented pose landmark detection and joint-angle analysis to evaluate exercise posture and provide real-time corrective feedback.
- Integrated WebSocket-based communication between the computer vision backend and frontend for real-time posture monitoring.
- Designed an interactive web interface with exercise guides, webcam integration, performance tracking, and gamified features to improve user engagement.

Career Guidance System

- Developed an ML-powered career recommendation system that predicts suitable career paths based on users' skills, interests, and academic preferences.
- Built machine learning models using Python, Scikit-learn, NumPy, and Joblib to generate personalized career recommendations.
- Developed an interactive web interface using HTML, CSS, JavaScript, and PHP for collecting user inputs and presenting recommendations.
- Integrated MySQL for storing user information and career-related data, enabling personalized guidance and recommendation workflows.

IoT Fire Evacuation System – Real-Time Hazard Monitoring and Dynamic Pathfinding

- Developed an IoT-based fire safety system that continuously monitors temperature, smoke, and flame sensor data to calculate localized hazard scores across building zones.
- Implemented sensor fusion using a weighted hazard-scoring mechanism and integrated the A* pathfinding algorithm to dynamically calculate safe evacuation routes as hazards spread.
- Built ESP32-based sensor and guidance nodes using MQTT for lightweight real-time telemetry and command distribution, with LED indicators and buzzer alerts for physical evacuation guidance.
- Developed a Streamlit dashboard to visualize building occupancy, hazard heatmaps, and active evacuation routes, with a fail-safe red-alert state for network communication failures.

Education

Bachelor of Technology (B.Tech) in Computer Science and Engineering

2023 – 2027

Artificial Intelligence and Machine Learning

Jawaharlal Nehru Technological University Hyderabad (JNTUH)

CGPA: 8.41/10.0

Certifications

- Machine Learning / Artificial Intelligence Certification
- Python Certification
